Off. and Def. Efficiency Translation to Postseason Finish

All statistics in college basketball contributes to the outcome of the game, which in turn contributes to the record for a team leading them into the March Madness tournament. Data over the years, then, provides regressions that helps predict who might end up in the tournament the following year.

March Madness Placement Distribution

This dataset contains seven years-worth of data from 2013 to 2019 on all the NCAA Division 1 basketball teams in the United States. More specifically, it contains their conference, games played and won, postseason finish as well as seed in the March Madness tournament, various average game statistics, and year these stats were recorded for each team. The data contains 2456 rows and 25 columns after I added a postseason confirmation column for further analysis.
